mrsampy.github.io · github.com/MrSampy

Full-stack .NET developer with four years on one enterprise insurance policy administration platform, moving from test automation through QA leadership into feature development. Ships C# / ASP.NET Core, EF Core and T-SQL across the full policy lifecycle — product configuration, underwriting rules, commissions and tariffs, printed forms and REST/SOAP integrations with registries and partner APIs — with the QA instinct to know what breaks in production before it does. Based in Stavanger, working internationally.

EXPERIENCE

Oct 2023 —
Present
Kyiv → Stavanger

Software Engineer

In-Core

Policy administration platform for 7 insurance companies — C#, .NET / ASP.NET Core, EF Core, MS SQL Server, JavaScript, Azure DevOps.

- Own end-to-end delivery of policy-lifecycle features — product configuration, underwriting rules, commission and tariff plans, sales-channel restrictions, prolongation and cross-sale flows — from domain logic and SQL to web UI, so insurers launch new products through configuration rather than custom code. 140+ features shipped across 7 insurer deployments and a bank partner channel.
- Integrated the platform with a national motor-insurance bureau, the state business registry, the central bank's intermediaries registry, an e-signature provider, a payment provider and a bank's partner API, and extended the platform's own REST Gateway API — removing manual registry lookups and document hand-offs from policy issuance.
- Author of 800+ versioned database migrations that keep five customer databases in sync with product configuration.
- Brought unit testing to modules that had none: 430 xUnit/Moq tests across 12 test projects and Jest coverage for the legacy JavaScript front end, contributing to a 7× growth of the platform test suite (600 → 4,100 tests) while modernising legacy code on current .NET.
- Serve as a first-line owner for production issues raised by insurers and business users: 600+ defects resolved in 2025–2026 with the root cause fixed, not patched, keeping policy issuance uninterrupted.
- 1,100+ pull requests merged in a sprint-driven Azure DevOps flow; 93% of committed work closed within its sprint.

Jan 2024 – Aug
2024

QA Team Lead

In-Core

- Led the platform QA team (3 engineers) and owned the release quality gate on a two-week sprint cadence; the year closed with 5× fewer critical-severity defects than the previous one.
- Set the test strategy: acceptance criteria on 100+ backlog items, Azure Test Plans suites, and SpecFlow regression scenarios covering the policy lifecycle for six insurer configurations.
- Ran defect triage and prioritisation for the team – planned 1,000+ work items, verified 400+ fixes before release with a median turnaround of about a day – and onboarded two new testers.
- Verified commission and underwriting calculations directly in SQL against customer-scale databases, catching pricing errors before they reached policies.

Oct 2022 – Dec
2023

Automation QA Engineer

In-Core

- Co-built the automated regression suite for six insurer deployments – 1,300 Selenium/MSTest UI tests, 330 SpecFlow scenarios and an API test project – covering the most business-critical policy flows; one of the two main framework contributors (950+ commits).
- Designed reusable framework layers: test-data builders (50+), page objects, shared helpers (90+), per-customer configuration and a REST client – cutting the cost of adding a new insurer's suite to configuration plus scenarios.
- Complemented automation with exploratory testing of new features, documenting 70+ test cases and 90 test suites in Azure Test Plans.

SKILLS

Backend	C#, ASP.NET Core / MVC, Entity Framework Core, microservices, design & architecture patterns, Go
Data	MS SQL Server, T-SQL, stored procedures, migrations, performance tuning
Frontend & APIs	JavaScript, REST, SOAP, partner and registry integrations
Quality	xUnit, Moq, UI/API test automation, integration and end-to-end testing, test strategy
Tooling	Azure DevOps, Git, Docker

EDUCATION

M.Sc. Computer Science, Software Engineering
Kyiv Polytechnic Institute · 2025 – 2026

B.Sc. Computer Science, Software Engineering
